不使用 Cygwin, 在 eclipse 中快速开发 JNI, 一键生成 C 头文件. h, 以及一键使用 NDK 交叉编译

<u>道1遥1游</u> 发表于 2013-11-18 18:35 3 个月前, 7 回/1269 阅, 最后回答: 1 个月前

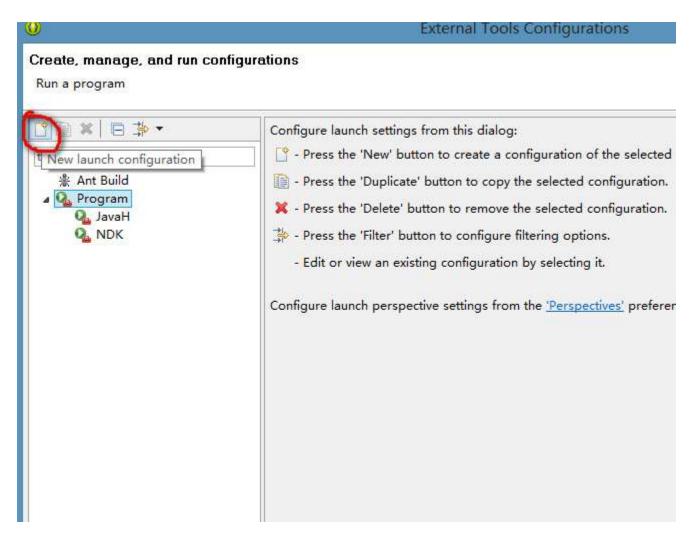

- 一、使用环境 1、windows64 位操作系统 2、ADT 为 adt-bundle-windows-x86_64-20130917 r9b
- 3、NDK 为 android-ndk-

二、配置生成头文件.h

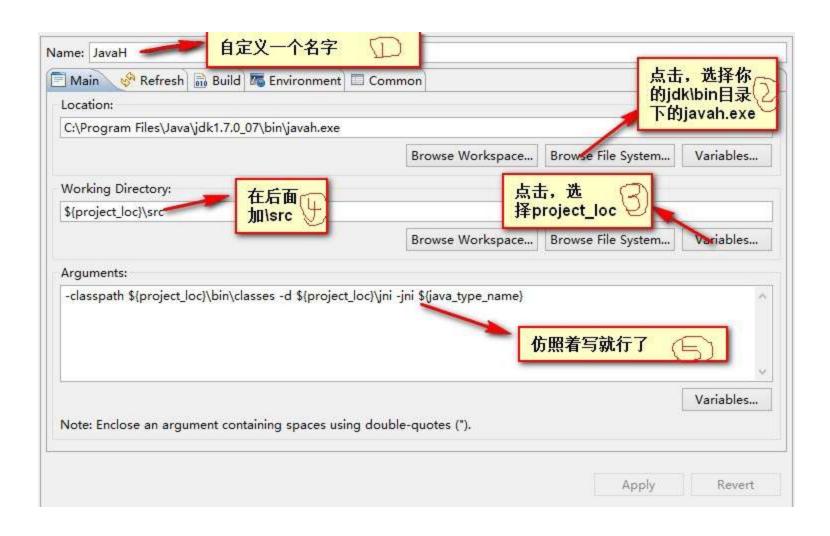

1.首先,如图所示,点击External Tools Configurations...

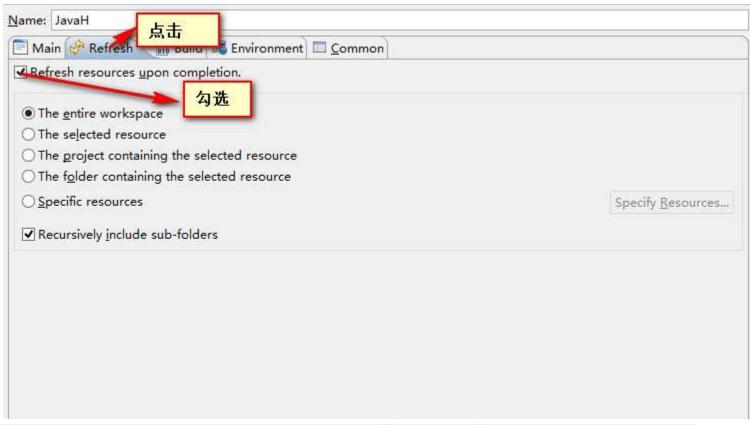

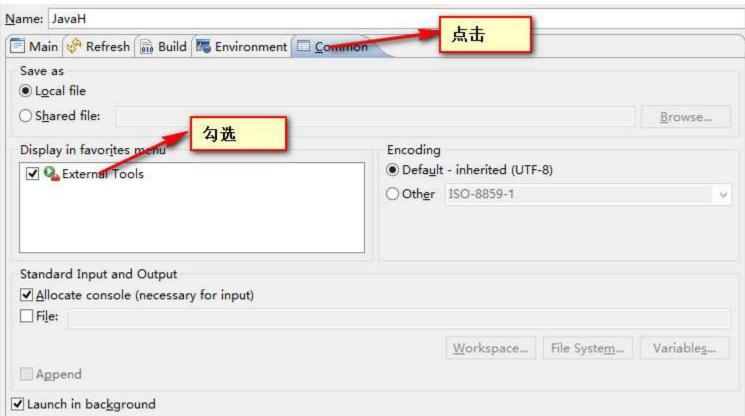

2.然后,如图所示,点击

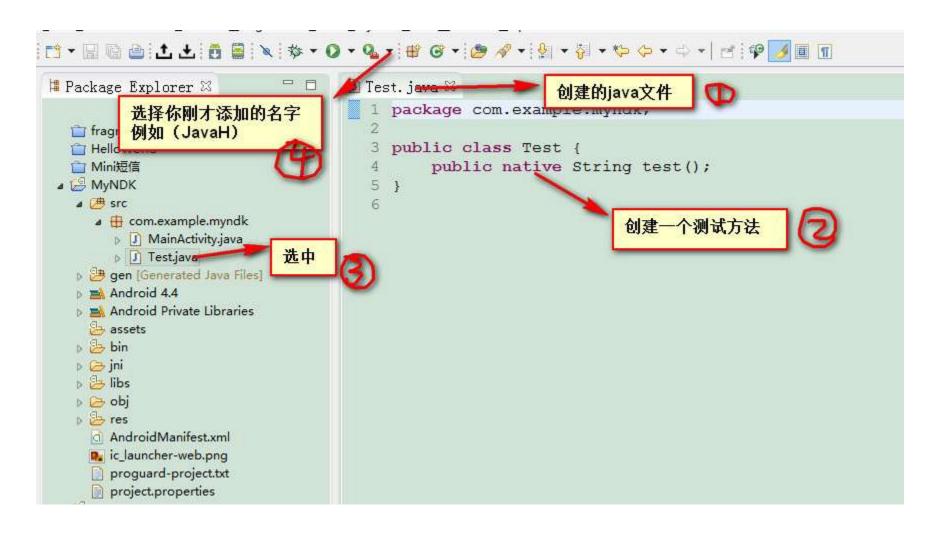

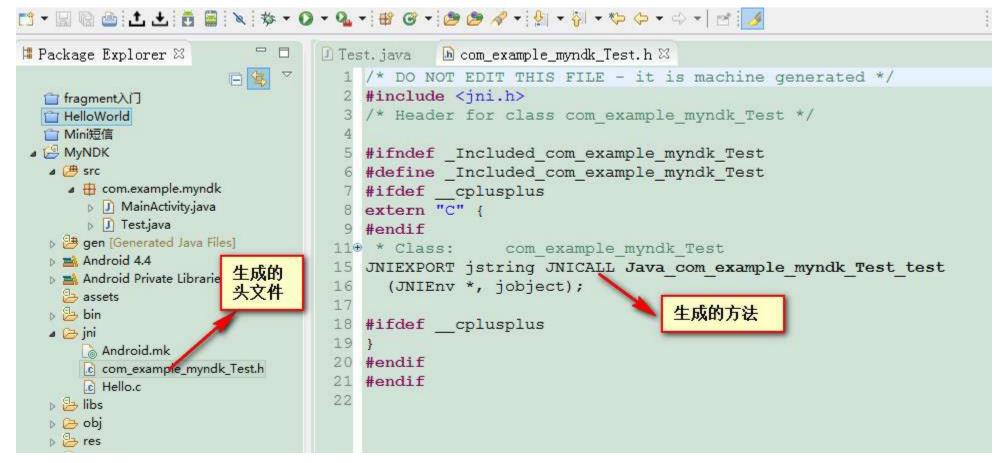

3.接下来,看图操作

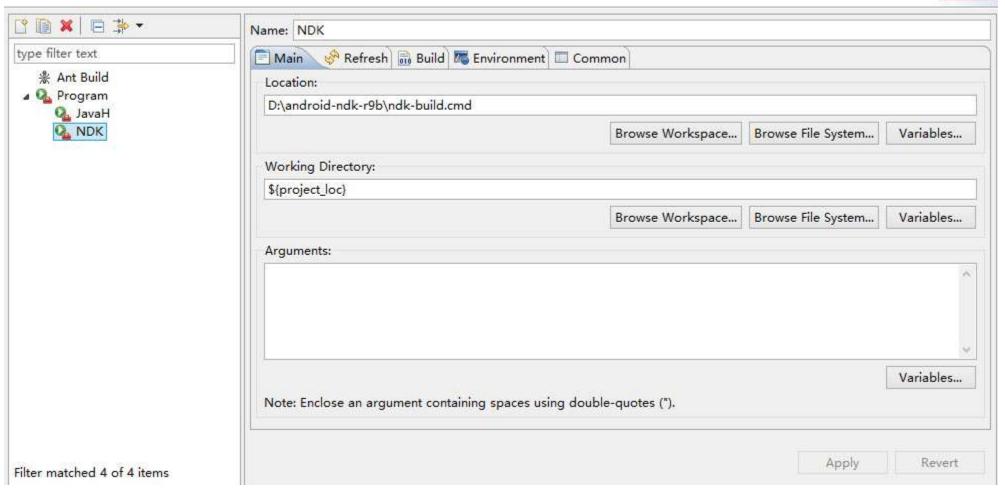

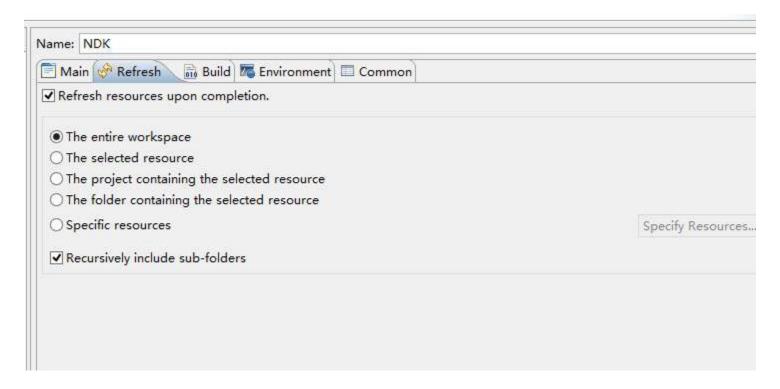

三、配置 build ndk,和上面类似,参考图中配置即可

Create, manage, and run configurations

Run a program

创建 C 文件

```
- -
📱 Package Explorer 🛭
                                   ☑ Test. java
                                                 le com_example_myndk_Test.h
                                                                              ☑ Hello.c 🏻
                                      1 #include <stdio.h>
                                        #include <jni.h>

☐ fragmentλ门

  HelloWorld
                                        #include "com_example_myndk_Test.h"

    Mini短信

a 😕 MyNDK
                                      50 JNIEXPORT jstring JNICALL Java com example myndk Test test
  △ # src
                                        (JNIEnv * env, jobject obj) {

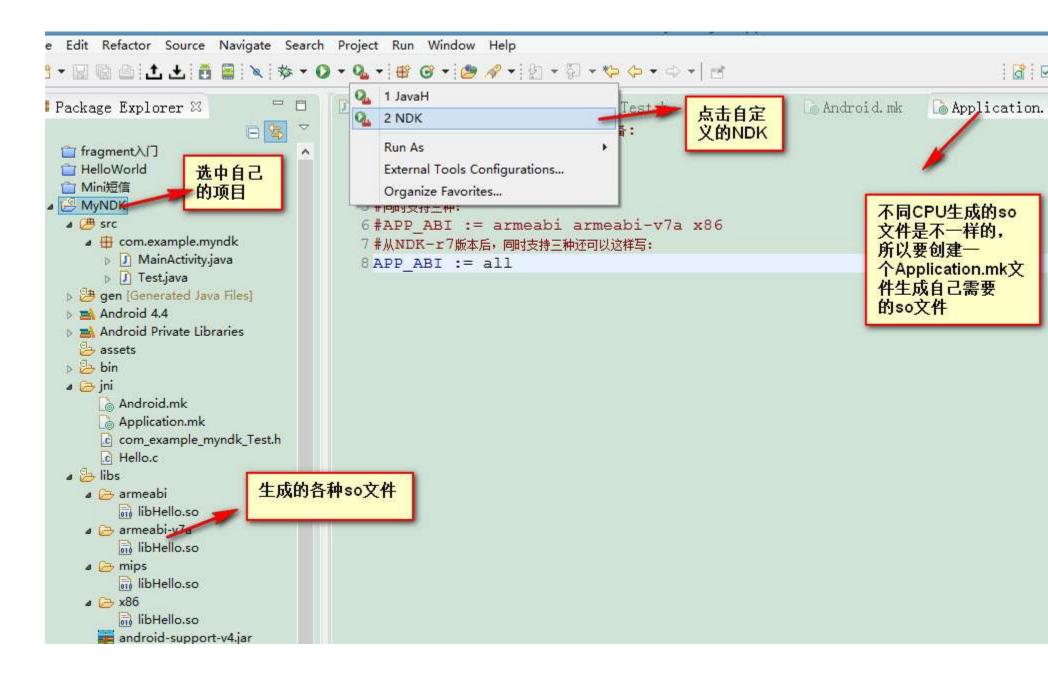

→ tom.example.myndk

       MainActivity.java
                                     8
                                             return (*(*env)).NewStringUTF(env, "hello from c,你好");
       D Test.java
                                     9
  gen [Generated Java Files]
                                     10
  Android 4.4
                                    11
  Android Private Libraries
    assets
  Þ 🔓 bin
  a 🗁 jni
      Android.mk
      com_example_myndk_Test.h
      © Hello.c
  D 🔓 libs
  D 🗁 obj
  b 📴 res
    AndroidManifest.xml
    ic_launcher-web.png
```

创建 Android. mk 文件

创建 Application. mk 文件

最后 加载 so 的库文件 就可以把 C 语言的函数当 Java 函数使用了

好了,上面就是是用 eclipse 快速开发 JNI 的方法了,你学会了吗?
